

ABSTRACT

A folding boat is disclosed comprising a deck, a plurality of safety fences and a plurality of
5 pontoons. The deck floor is composed of a plurality of various deck sections that are pivotally
hinged to each other so that they form a common coplanar deck flooring for use in the
operational mode of the folding boat. The plurality of various deck sections can be easily folded
into a substantially compact configuration so that the folded boat can be conveniently stored and
easily transported. Floatation of the folding boat is provided by a plurality of pontoons attached
10 to some of the deck panels that make up the common coplanar floor. The folding boat further
comprises a safety fence composed along the starboard and port sides.
